

IMPORTANT: Filtering Content at Home

We published this a number of weeks ago, but wanted to publish it again as it is of vital importance that network filters are set up in the home.

The ease with which inappropriate content can be accessed online these days is scary. However, we really don't want to stop our child/ren from using this valuable learning tool. The below website is a link to a blog post by the Cyber Safety Lady regarding what you can do to keep your home network safe, so that you can still access the internet, but without most of the nasties. Please take the time to read this as it has specific things that you can do to prevent your child from seeing things that they shouldn't.

One of the key ideas she gives in this blog post is to set up a home filtering system. Luckily this can be done for free, and we have popped a link to the website that will allow you to do this below. We can't urge you strongly enough to ensure that your home network has this, or some other filtering system in place.
